

EXTERIOR INSULATED RENDER SYSTEM

FIRE RESISTANT ENVIROWALL EXTERIOR INSULATED RENDER SYSTEM OFFERS PREMIUM PROTECTION...

Specialist Rendering Services deployed over 20 years of industry know-how to complete a 5,000 m2 installation of SPSEnvirowall exterior insulated render system at Altnagelvin.

An approved Environwall applicator for 12 years, Specialist Rendering Services was the ideal company to take on this prestigious project. By installing the SPSEnvirowall system, they know their finished work will perform at the highest standards with longevity and optimum fire-resistant protection built-in. The system incorporates 250mm of Rockwool insulation, 6 to 8mm of Envirowall base coat with embedded mesh and a 1.5mm lightly textured decorative finish.

"This provides an excellent fire retardant solution, essential for public buildings," says Specialist

Rendering Services founder, Jason McCarroll. "Envirowall systems are user-friendly for installers and they've been developed to achieve high levels of thermal performance without compromising on the visual appearance."

Specialist Rendering Services has worked for main contractor Farrans on all three phases at Altnagelvin Hospital and for 15 years in total.

"Farrans is a fantastic contractor to work with," says Jason. "Their onsite team led by Project Manager, David Bolton with Dermot Toye as Externals Manager and QS Caoime McNabb, helped the job run smoothly and finish ahead of schedule. There were never problems, always solutions.

"I'm looking forward to the next project we have lined up with them at Charlton Athletics FC Academy, London."
